XM radio, like any new idea is being met with opposition from the old school, hard line radio guys.

I believe that because of the unique ability of XM satellite radio to provide both current popular music, eclectic programming, news, sports weather and other great features they are able to satisfy a larger cumulative audience than the standard radio industry.

The commercial radio industry has dictated what America will listen to, how often we'll listen to it. Along came XM and "tipped the apple cart".

I say let XM do what they will. The aging Radio industry will have to adapt or be left by the way side. Throughout American history old ways have given way to new ideas.

The stage coach gave way to the steam engine. The steam engine gave way to the diesel electric. The diesel electric gave way to the airplane and automobiles...

Please don't hinder XM, allow them to grow and prosper. It is the next logical step in the ongoing evolution of technology!

Thank you for your time,  
David Hanna
